

LOG GRABS

LOG GRABS

We use only the highest quality steel and components to complement our heavy-duty and hard wearing design, resulting in enhanced adaptability of any excavator and allowing for more efficient and fast handling of materials.

ShawX custom Grabs are:

- ✓ 100% Australian designed and made.
- ✓ Heavy-duty and hard wearing.
- ✓ Made of the highest quality steel and components.
- ✓ Quality designed and tested.
- ✓ Suitable for all kinds of earthmoving machinery.

MANUAL LOG GRABS

Manual log grabs are ideal for moving timber and logging. Built light and strong, they're made for fast movement of logs and timber. Our manual log grabs are fully greasable and bronze bushed for longevity.

HYDRAULIC LOG GRABS

Ideal for timber and logging, hydraulic log grabs have a light and strong build with a twin ram design and are fully greasable and bronze bushed for longevity.

These grabs are very controllable and accurate, making light work of sorting materials and can easily be moved from one machine to another and work extremely well with a Tilt Hitch.
