

# RAKES

## CUSTOM MADE RAKES for excavators and dozer sticks

We custom design and build dozer, loader and excavator rakes to your requirements.

ShawX custom Rakes are:

- ✓ 100% Australian designed and made.
- ✓ Heavy-duty and hard wearing.
- ✓ Made of the highest quality steel and components.
- ✓ Quality designed and tested.
- ✓ Custom made to order, to ensure they suit your application.

## DOZER & LOADER STICK RAKES

Have a heavy-duty design and are constructed with a thick lower beam with 450-grade feet, standard cutter bar and 80-grade side infill panels. The open barred headboard design allows vision while protecting your machine, and angled wings ensure material is kept in front of the blade, increasing productivity.

Our rakes are a walk in design with fold up legs, enabling the rake to be positioned anywhere. The stand-alone system has a simple one-person clip-on design.

## EXCAVATOR RAKES

The ShawX excavator rakes have a solid design and build. Our hollow bar beam design has wrap around fingers and 450-grade wear pads with lower gussets for strength. We can custom make to any brand of machine and any requirement size for your project.
