Recycling Grabs

MANUAL ROCK GRABS

Our heavy-duty manual rock grabs can be used for all works. The 5-fingered box type grab is made with 450-grade finger ends and greaseable bronze bushed centre pins for a longer life. The tight meshing finger design makes these grabs fast and controllable.

The nimble design makes them user friendly while maintaining strength for a long lasting grab. Manual rock grabs are also available in our X-series range for added strength.

HYDRAULIC ROCK GRABS

Hydraulic rock grabs are versatile, able to be used for all works and very handy for demolition. Fabricated with a heavy-duty 5-finger box type, twin ram design with 450-grade lower fingers, the grab is fully greaseable and bronze brushed for longevity.

Tight meshing fingers makes these grabs very controllable when picking up the smallest materials, yet tough enough for the largest of jobs.
